

SRIRAM RAGHAVAN, PMP®

Automation Architect | QA Automation Strategy | AI-Accelerated Test Automation

+91 9941374772 | Sriram.r83@gmail.com | Resume URL: sriramr83-byte.github.io/Resume/

TECHNICAL EXPERTISE

Tools

Playwright
Selenium WebDriver
TestNG
UFT / QTP
ALM
Visual Studio

AI Assisted Dev

GHCP
GEN AI Prompt Eng
MCP (Playwright)

API

PostMan
REST Assured

Programming & Scripting

Java
Python
VBScript

Project Management

PPM
PSA
SAP Fieldglass
Agile (Scrum/SAFe)

Cloud & DevOps

Microsoft Azure
- DevOps Services
- Storage containers
- Azure Application Insights
AWS S3

Data Engineering & Validation

ETL Validation
JSON & Parquet
Dataset Validation
Pandas, PySpark

Domains

Energy / Oil & Gas
Healthcare
Telecom
Retail

PROFESSIONAL SUMMARY

- Automation Architect and QA Engineering Leader with 20+ years of experience designing enterprise-scale automation strategies, modernizing test ecosystems, and enabling quality transformation across Energy, Healthcare, Telecom, and Retail domains.
- Hands-on expertise spanning Playwright, Selenium WebDriver, API automation, Azure DevOps, ETL validation, Python, PySpark, and cloud-enabled quality engineering practices. Experienced in integrating automation into CI/CD pipelines and driving adoption of reusable engineering standards across distributed teams.
- Delivered measurable impact by leveraging GitHub Copilot (GHCP) within Visual Studio Code to accelerate automation development, reduce manual coding effort through AI-assisted code generation and intelligent suggestions, and enable scalable, maintainable solutions for business-critical applications.
- Proven track record of translating business objectives into pragmatic quality engineering solutions through architecture-led decision making, framework modernization, risk-based quality practices, and automation governance.
- Adept at partnering with stakeholders to define automation roadmaps, delivery approaches, and investment priorities that encourage release confidence and accelerate business outcomes.

LEADERSHIP HIGHLIGHTS

- Played a key end-to-end role in the modernization of a legacy Pega application into a custom-built in-house solution, combining Business Analysis, Quality Engineering, and test leadership from conception through production. Leveraged deep Pega, Energy domain knowledge to drive requirements and gap analysis, business stakeholder engagement, functional validation, migration assurance, automation, UAT, and production hyper care, contributing to a project that delivered approximately **\$1M in annual IT OPEX** savings within a single Program Increment (PI).
- Defined enterprise automation strategies aligned to business risk, release objectives, application architecture, and long-term maintainability.
- Led framework modernization initiatives by evaluating emerging technologies, conducting proof-of-concepts, and recommending fit-for-purpose automation approaches.
- Influenced delivery and leadership stakeholders through risk-based quality assessments, automation investment recommendations, and release-readiness insights.
- Established reusable engineering practices, governance mechanisms, and quality standards to improve consistency, maintainability, and execution efficiency.
- Accelerated engineering productivity using AI-assisted development practices for test design, script generation, troubleshooting, and knowledge enablement.
- Balanced architectural leadership with hands-on execution, mentoring teams while remaining actively involved in solving complex automation challenges.

PROFESSIONAL EXPERIENCE

DEXIAN | Consulting Delivery, Lead QA | Jul 2026 – Present

Application Modernization – Energy Domain

- Provided end-to-end Business Analysis, Quality Engineering, and test leadership throughout the Pega based application modernization, bridging business and technical stakeholders from requirements and gap analysis through solution validation, UAT, automation, production readiness, and post-go-live hyper care.
- Defined the end-to-end quality strategy, test scope, priorities, entry/exit criteria, and execution plan across functional, integration, end-to-end, regression, migration, and production validation.

Certifications

PMP® – PMI
AWS Certified Cloud Practitioner
Microsoft Azure AZ-900 & AI-900
ISTQB Advanced Level Test Manager
Certified Scrum Master
HP AIS

Education

B.E. Electrical & Electronics
University of Madras, 2004

- Combined QA leadership with business analysis, leveraging Pega expertise to elicit requirements, clarify workflows and business rules, identify functional gaps, and validate parity with the replacement application.
- GitHub Copilot & AI-Assisted Engineering: Leveraged GitHub Copilot to structure and refine requirements.md, analyze legacy Pega functionality, identify and document functional gaps, validate business rules and workflows, support requirements traceability, and assist in reviewing and validating the target application against documented requirements.
- Playwright Automation: Provided hands-on leadership in Playwright automation by designing and developing workflow scripts while guiding the team on automation approach, script design, and implementation for repeatable end-to-end and regression validation.
- Led comparative UI and functional testing, migration validation, database verification, and Azure Storage validation, confirming data accuracy, persistence, file processing, and integration outcomes.
- UAT Coordination & Business Acceptance: Supported UAT kickoff by aligning business users on scope, test scenarios, execution approach, and expected outcomes; facilitated UAT execution, issue clarification, defect tracking, and validation of business acceptance criteria.
- Directed defect triage, root-cause analysis, retesting, quality reporting, release readiness, user provisioning, role-based access validation, and post-go-live hype care.
- Bridged business and technical stakeholders throughout modernization, production transition, and stabilization.

DXC TECHNOLOGY | Senior Analyst I, Software Engineering | Apr 2010 – Jul 2026

Mid Continental Business Unit Solution Delivery Applications

- Architected and delivered managed QA and automation services supporting 10+ enterprise applications within Client's upstream energy ecosystem, including geoscience platforms, middleware systems, and operational applications.
- Defined automation roadmaps and quality strategies aligned with release objectives, business priorities, and evolving technology landscapes
- Modernized automation capabilities through adoption of Playwright and enhancement of Selenium-based solutions, improving scalability, maintainability, and coverage across business-critical applications
- Reduced automation development effort by 30% through AI-assisted engineering practices that accelerated script creation, improved troubleshooting, and enhanced test design effectiveness..
- Established governance practices including risk assessments, quality gates, release-readiness criteria, and review mechanisms to improve release confidence and reduce defect leakage.
- Partnered with delivery leadership during demand intake and planning discussions to assess automation opportunities, define scope, estimate effort, and recommend execution approaches.
- Designed Python- and PySpark-based validation solutions for JSON and Parquet datasets supporting middleware integrations, ETL processes, and AI/ML-driven workflows.
- Integrated automation into Azure DevOps delivery pipelines, enabling continuous quality feedback and supporting faster release cycles.
- Presented quality health indicators, automation progress, delivery risks, and improvement recommendations through governance and leadership review forums.
- Mentored team members on automation best practices, framework adoption, and emerging technologies to strengthen organizational capability and engineering maturity.

Other Engagements (Telecom, Healthcare)

- Led quality initiatives across ETL, reporting, and enterprise applications involving large-scale data validation and backend testing.
- Designed modular automation frameworks using UFT/QTP and reusable components to improve regression efficiency and execution scalability.
- Developed automation-driven validation approaches for transformation logic, data integrity, and reporting accuracy across data warehouse ecosystems.
- Built utilities supporting test data generation, reconciliation, and validation for complex ETL workflows.
- Conducted automation feasibility assessments and contributed to framework design decisions and quality strategy formulation.

WIPRO TECHNOLOGIES | Senior Test Engineer | Jan 2008 – Apr 2010

- Delivered automation and data validation solutions for enterprise systems, with strong focus on ETL, reporting, backend validation, and regression automation.
- Contributed to framework design, reusable automation components, and test strategy inputs for large-scale business applications.

HCL TECHNOLOGIES | Test Engineer | Mar 2005 – Dec 2007

- Built foundational expertise in functional testing, automation support, ETL validation, and enterprise application quality assurance across global delivery engagements.

SELECTED ACHIEVEMENTS

- DXC Champs Awards (FY23 Q4, FY23 Q2, FY22 Q1) for consistent delivery excellence and impact.
- Recognized for automation contributions, learning enablement, and talent support within the organization.
- Received Certificate of Merit / Emerald recognition for outstanding automation support and delivery contribution
